

Dear All:

Please disregard the release, issued Monday, 2nd June, concerning the removal of Carbon Aerogel from PowerStor[®] products and the reference to using the term “aerogel.” I have listed the corrected communication below.

Coin cell supercapacitor KR, KS, KSR and KSL ranges do not contain Aerogel Carbon and should stop being described, or referred to, as “aerogel” in literature and communications.

There is no change in the way we describe or refer to all other supercapacitors.

Through our process of continuous improvement we have made minor changes to other cylindrical capacitors. Please be assured that any changes to our products are always fully assessed and validated. If at any time we need to make a significant design change, you and your customers will be fully informed.

Please accept my apologies for any confusion caused. If you have any question concerning this matter please don't hesitate to contact me.

Regards

Chris Likely
