October 1, 2008

Product Change Notice

Part Numbers affected: CL2-2.5-xxxxx, CL2-5.0-xxxxx, and CL2-10-xxxxx (where xxxxx represents any P/N in the series)

In our continuous efforts to provide product enhancement and ensure unparalleled component reliability, we have upgraded the design of our Class 2, (CL2 - printed circuit board type transformers).

The modified design provides superior resistance to shock and vibration while maintaining consistent connectivity.

The design modification has no impact on the mounting scheme and existing terminal spacing. Therefore, your existing P.C. boards configured, to the original CL2 transformers, will readily accept the revised CL2 series components.

Easily identifiable, the revised CL2 series part number includes the alpha character "R" in the P/N print (example CL2-2.5R-xxxxx).

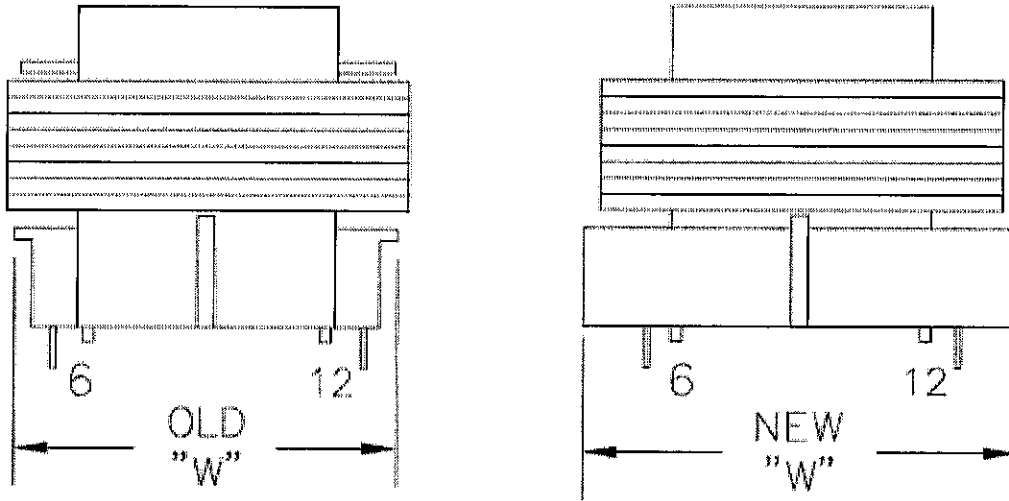

Note: To accommodate the enhanced terminal design, the protective shroud on VA sizes 2.5 and 5.0 required a slight modification. The shroud modification resulted in a minor 0.120", (3.2mm) overall increase in the width, (W) dimension, (please see attached drawing).

We kindly ask the receiver of this document to ensure the appropriate personnel and/or department managers within your company are advised of this PCN.

Please address any technical inquiries relevant to this Product Change Notice to our engineering department at techhelp@signaltransformer.com. All customer service inquiries may be directed to sales@signaltransformer.com, or by phone at our toll free number 1-866-239-5777.
